AMENDMENTS TO THE SPECIFICATION

Please add the following new paragraph at page 9, line 1:

Figure 28 depicts a method of comparing products wherein at least one of the products is automatically generated.

Please add the following new paragraph at page 20, line 12:

Figure 28 depicts one embodiment of a method of comparing products 2800 wherein at least one of the products is automatically generated. The method can be implemented in a computer system, such as the computer of Figure 2. The computer system includes a processor coupled to a computer readable medium. The computer readable medium includes code that is executable by the processor to cause the processor to perform the method. In operation 2802, data is received from a first computer system, wherein the received data includes product configuration data. In operation 2804, the received data is processed with a second computer system to generate a first product configuration. In operation 2806, the data is provided to the first computer system to allow the first computer system to display the first product configuration. In operation 2808, an auto-generate request, separate from the received data is received from the received data, from the first computer system to automatically generate a second product configuration that is comparable to the first product configuration. The auto-generate request includes data representing criteria to establish a basis for comparability between the first product configuration and the second product configuration. In operation 2810, the auto-generate request is processed with the second computer system to automatically generate the second product configuration in accordance with the criteria to establish a basis for comparability between the first product configuration and the second product configuration. In operation 2812, data is provided to the first computer system to allow the first computer system to display the first and second product configurations and allow comparison of features of the first and second product configurations.
